

DATA LOSS KNOCKED YOU OUT?

MICROSYNC ANNOUNCES **Boomerang**

A BREAKTHROUGH IN POWER PROTECTION

Boomerang Saves Your Data...

Boomerang is Microsync's latest development in personal computer power protection. Boomerang automatically saves your work in progress in the event of:

- Power failure, blown fuse, or brownout.
- Accidental pulling out or tripping over the cord.
- Forgetting to save your RAM disk before turning off the switch.

	Boomerang	UPS	Keystroke Saver
Automatically saves state of entire system	YES	NO	Only to point of last save
Provides a battery backed-up RAM disk	YES	NO	Only to point of last save
Protects against user error	YES	NO	Only to point of last save
Ability to exit application and return later	YES	NO	YES
Never interrupts work	YES	YES	NO
Increases hard disk life by parking heads	YES	NO	NO

Returns Your Data...

When power returns or the next time you boot your computer, Boomerang returns your data to you with a single command.

And More!

Boomerang also offers you these added benefits:

- Allows you to turn off power while in an application, then the next time you boot, return to the same place, thereby saving you the time of reloading the application and file and repositioning the cursor.
- Increases the life of your hard disk and protects your data from a head crash by parking the heads in a non-data area each time you turn off the switch.

**Boomerang Pays for Itself...
...with the First Save!**

How Does Boomerang Do All This?

Boomerang constantly monitors your computer's power supply. When power goes out for any reason, Boomerang's on-board battery begins to supply power to the computer. At the same time, Boomerang's software saves the state of the entire system to your hard disk. When the entire system has been saved, Boomerang shuts the computer down cleanly (including parking your hard disk heads). Then when normal power returns, a simple command to Boomerang restores the computer to its previous state with no loss of data. That's all there is to it.

Another Slotless Installation

Just as with our dClock II™, Boomerang does not take up a valuable expansion slot in your computer, nor is it an external unit that takes up room on your desk. Boomerang fits inside the system unit case and plugs in-line between the power supply and the motherboard.

Hardware and Software Requirements

- IBM® or 100% compatible personal computer: PC, XT, or AT® type.
- 256K bytes of memory.
- Internal hard disk drive. Boomerang takes up as much room on disk as you have memory in your system plus a few bytes of overhead. This memory includes: system memory, video memory (4K-256K depending on your type of monitor), expanded memory (EMS or EEMS), and extended memory.
- Monochrome, Hercules™, color, or EGA monitor. (Please call about support for other monitors.)
- DOS 2.1 or later.

Specifications

- Dimensions: 5.3" x 3.2" x 3.7"
- Weight: 1.8 lb.
- Battery: 6V, 2.6AH. Recharges while computer is on. Estimated life of two years.
- Voltage Accuracy: $5V \pm 1\%$, $-5V \pm 4\%$, $12V \pm 1\%$, $-12V \pm 4\%$
